

SITE VISIT

RESIDENTIAL DESIGN

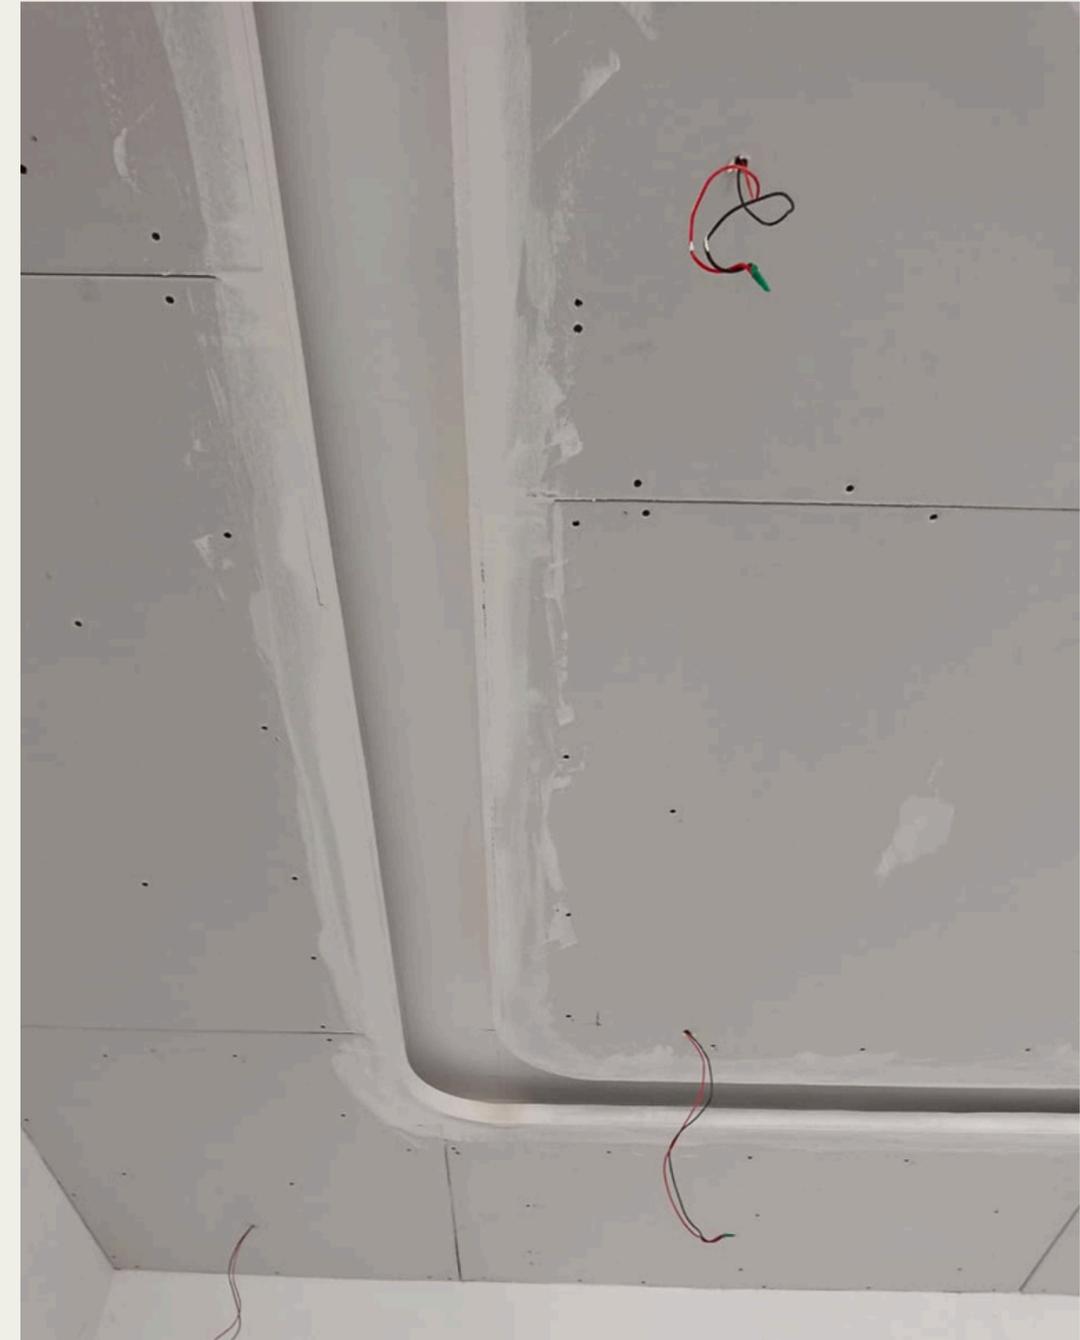

Pimpri Chinchwad University
Pune Design School
Interior & Space Design

SECOND SITE VISIT

During our second site visit, we focused on measurements and their application in interior planning. We prepared small elevations to determine appropriate furniture height, depth, and width, understanding how accurate dimensions affect functionality and proportion.

We then carried out floor masking by marking standard furniture sizes on-site using measuring tape and masking tape. This helped us visualize spatial arrangement, assess circulation space, and identify potential design issues before execution.

Additionally, through client interaction and observation, we gained insights into user requirements and learned how to develop a basic client profile based on lifestyle and functional needs. Overall, the visit enhanced our understanding of practical implementation and user-centered design.
